Education

Bachelor's Degree in Computer Science	Oct 2024 - June 2027
The College of Management Academic Studies	
IDF Officer's Course	Aug 2023 - Dec 2023
Bahad 1 - School for Officers	
DevOps Engineer Course	Mar 2022 - Jul 2022
Basmach - IDF School of Computer Science	

Experience

DevOps Team Lead Israeli Defense Force	Jul 2024 - May 2026
- Managed an 8-member DevOps team, orchestrating strategic roadmaps, project timelines, and execution within an Agile Scrum framework. - Responsible for designing, implementing and maintaining, Continuous Integration (CI), Delivery and Deployment (CD) Processes across Cloud and On-Premise environments. - Cultivated a proactive DevSecOps culture by integrating SonarQube and JFrog Xray into active workflows, successfully driving "Shift-Left" adoption across engineering teams. - Standardized and maintained a full-scale monitoring and logging ecosystem, leveraging Prometheus to capture system and application metrics, Grafana Loki for log aggregation, and Grafana Mimir for long-term retention—all visualized via centralized Grafana dashboards. - Implemented ticketing service (ServiceNow) due to the team providing DevOps services to 500+ developers, cyber and IT personnel.	
DevOps Engineer Israeli Defense Force	Aug 2022 - Jul 2024
- Designed and built CI/CD pipelines across different environments and architectures, ranging from Windows/Linux monoliths to Kubernetes microservices. - Developed automation solutions using Python, PowerShell, and Bash to improve internal processes and operational efficiency. - Easy to work with and collaborative, contributing to building reliable and scalable solutions. - Implemented Infrastructure as Code (IaC) solutions using Terraform and Ansible to provision and manage scalable environments. - Maintained DevOps platforms while implementing Disaster Recovery (DR), High Availability (HA), and BCP methodologies for Azure DevOps Server, Artifactory, SonarQube, AWX, and HashiCorp Vault. - Strong troubleshooting skills with the ability to identify root causes and optimize system performance efficiently.	

Projects

Network Communication Simulation Platform

- Created an automatic and dynamic environment on Openshift that simulates communication between VMs in order to test the communication protocol between them.
- Utilized: Ansible, Infrastructure as a code, Kubevirt, Openshift, Kubernetes, Jinja2, Windows VMs.

AWS ETL Deployment

- Spearheaded the full CI/CD automation of a serverless data ingestion pipeline, leveraging AWS CDK and Lambda to safely bridge external API data into an air-gapped ecosystem.
- Utilized: GitOps, GitHub Actions, AWS CDK - Python, Lambda, AWS S3, Custom Resources, VPC, Subnets

Algorithm Performance Optimization & Migration

- Led the migration of algorithm workloads from physical Windows environments to OpenShift, improving runtime performance and enabling automated deployments with Helm and ArgoCD.
- Utilized: Helm, ArgoCD, Python, AzureDevOps Pipelines, Docker.

Skills

- Team Leadership, Teamwork, Mentoring, Technical Documentation, Blameless Post-Mortems.
